

**Checklist for evaluating the task TC3052-201813.1-17411-T-4**

**100 grade points**

1. ☐ The student submits a ZIP file containing all source code according to a web version, to be shown on a desktop device, of your selected final project.
2. ☐ The student creates a ZIP file containing all source codes aforementioned, and these are integrated into the Visual Studio 2017 (VS2017) as a VS project.
3. The student takes into account and includes the feedback issued by the professor for the task T1, T2, and H3.
4. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least one functional requirement (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
5. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least one functional requirement (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
6. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least one functional requirement (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
7. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least two functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
8. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least two functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
9. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least two functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
10. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least three functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
11. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least three functional requirements (Taking into account both,

those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).

12. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least three functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
13. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least four functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
14. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least four functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
15. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least four functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
16. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least five functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
17. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least five functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
18. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least five functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
19. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least six functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
20. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least six functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).

21. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least six functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
22. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least seven functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
23. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least seven functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
24. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least seven functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
25. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least eight functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
26. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least eight functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
27. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least eight functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
28. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least nine functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
29. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least nine functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
30. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40,

last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least nine functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).

31. ☐ The student creates several web pages (front-end) of your selected final project according to a web version to be shown on a desktop device. All these web pages are according to at least ten functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
32. ☐ The student creates several web pages that are easy to understand with a clean and beautiful style. All these web pages are according to at least ten functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
33. ☐ The student creates several web pages that have the same behavior and look style for different browser and different versions of these browsers like, Chrome v50, last version of Chrome, Firefox V40, last version of Firefox, Opera V45, and last version of Opera. All these web pages are according to at least ten functional requirements (Taking into account both, those functional requirements included in your first proposal and those issued by the professor as feedback of the task T1).
